

Increase Competence in RAC for energy saving, safety and the environment: Real Alternatives

**Marco Buoni,
Vice-President International Affairs
Air Conditioning Refrigeration European Association (AREA)**

With contribution of
the LIFE programme
of the European Union

Our world needs refrigeration, air conditioning and heat pumps systems

Applications	Sectors	Equipment	Number of units in operation
Refrigeration and food (see § 2.1.)	Domestic refrigeration	Refrigerators and freezers	1.5 billion ^{(1) (2)}
	Commercial refrigeration	Commercial refrigeration equipment (including condensing units, stand-alone equipment and centralized systems)	90 million ^{(1) (2)}
	Refrigerated transport	Refrigerated vehicles (vans, trucks, semi-trailers or trailers)	4 million ⁽³⁾
		Refrigerated containers (« reefers »)	1.2 million ⁽²⁾
Air conditioning (see § 2.2.)	Air conditioners	Air-cooled systems	600 million ^{(2) (4)}
		Water chillers	2.8 million ⁽²⁾
	Mobile air-conditioning systems	Air-conditioned vehicles (passenger cars, commercial vehicles and buses)	700 million ⁽⁵⁾
Refrigeration and health (see § 2.3.)	Medicine	Magnetic Resonance Imaging (MRI) machines	25,000 ⁽⁶⁾
Refrigeration in industry (see § 2.4.)	Liquefied Natural Gas (LNG)	LNG receiving terminals	110 ⁽⁷⁾
		Liquefaction trains	92 ⁽⁷⁾
		LNG tanker fleet (vessels)	421 ⁽⁷⁾
Heat pumps (see § 2.5.)		Heat pumps (residential, commercial and industrial equipment, including reversible air-to-air air conditioners)	160 million ^{(8) (9)}
Leisure and sports (see § 2.6.)		Ice rinks	13,500 ⁽¹⁰⁾

- Number of refrigeration systems in operation worldwide per application

Source: 29th Informatory Note on Refrigeration Technologies / November 2015 “The Role of Refrigeration in the Global Economy”, *International Institute of Refrigeration IIR*

Increase in use of Refrigeration, air conditioning and heat pumps systems. Two consequences:

- 1) Energy consumption in refrigeration equipment, including air conditioning equipment, must be reduced. Or using renewable energy: heat pumps, photovoltaic, solar and wind energy...
 - Latest estimation (*): 10% of total energy consumption - 17% of the worldwide electricity consumption (more in hot countries) → lack of energy infrastructures and indirect global warming impact.
- 2) Most refrigeration, including air-conditioning, equipment, uses refrigerants.
 - CFCs and HCFCs destroy the stratospheric ozone layer. Most of them (CFCs, HCFCs, HFCs) are potent greenhouse gases. HCFCs will be phased out.
 - HFCs will be phased down: an international agreement took place in Kigali (Rwanda).

➤ Consequences will be very important for the whole world.

Financial, energetic, environmental, safety & reliability: Alternative Refrigerants & Leakage

Table: Range of values for charge and emission factors for RACHP systems

Type of Equipment	Typical Range in Charge Capacity (kg)	Installation Emission Factor (% of initial charge)	Operating Emissions (% of initial charge/ year)
Domestic Refrigeration	0.05 - 0.5	0.2 - 1.0	0.1 - 0.5
Stand-alone Commercial Applications	0.2 - 6	0.5 - 3	1 - 15
Medium & Large Commercial Applications	50 - 2,000	0.5 - 3	10 - 35
Transport Refrigeration	3 - 8	0.2 - 1	15 - 50
Industrial Refrigeration (inc. food processing and cold storage)	10 - 10,000	0.5 - 3	7 - 25
Chillers	10 - 2,000	0.2 - 1	2 - 15
Residential and Commercial A/C including Heat Pumps	0.5 - 100	0.2 - 1	1 - 10
Mobile Air Conditioning	0.5 - 1.5	0.2 - 0.5	10 - 20

Making a case for reducing leakage and change refrigerants

- Reducing leakage makes business, financial and environmental sense. The benefits to business include:
 - Compliance with legislation including the F Gas regulation;
 - Improved “green” credentials;
 - Reduced production down time / increased sales fixture availability / improved staff comfort as a result of improved reliability;
 - Less health and safety risk from refrigeration or air conditioning – directly from refrigerant emissions and, for food applications, indirectly as a result of improved reliability.
- In addition there are financial benefits:
 - Less refrigerant cost;
 - Less service cost;
 - Lower costs associated with plant down time;
 - No loss of energy efficiency associated with reduced refrigerant charge. These costs may need to be offset against increased maintenance or some additional capital expenditure, but usually the difference is positive.
- The environmental benefits are in parallel with the benefits identified above and include:
 - More efficient operation of RAC systems and hence lower emissions of CO₂ at the power station;
 - Lower emissions of greenhouse gases.

To increase energy efficiency and safety → Training and certification

The Refrigeration, Air Conditioning and Heat Pumps systems containing fluorinated refrigerants in EU should have:

- Logbook
- Periodical inspections
- Installation, repair only by certified craftsmen
- Right equipment (also suitable for alternative refrigerants)

Mandatory Certification to handle all refrigerants

Table 2: Analysis of training in climate-friendly alternative refrigerants to fluorinated greenhouse gases

	Ammonia	CO ₂	Hydrocarbons: small hermetic systems	Hydrocarbons: larger systems (split systems, chillers)	HFOs
Training available in country (% of Member States)	71%	52%	48%	35%	20%
Proportion of certified fluorinated gas personnel trained in alternative refrigerants	2.3%	2.2%	0.7%	0.05%	0%

In EU:
Report of EU commission presented at
Consultation Forum 1st December

Contractors' training with low GWP refrigerants: mind the gap!

Kigali Amendment includes measures in favour of a decreased use of HFCs in RACHP equipment. Such measures would, in turn, result in an increased use of alternatives, namely low GWP (global warming potential) refrigerants, and in particular the so-called “natural refrigerants” (CO₂, hydrocarbons and ammonia). Mindful of the key role played by contractors in the safe, efficient and reliable functioning of equipment working with natural refrigerants, AREA sought an overview of the availability and level of training in the EU.

Real Alternatives for LIFE (next phase 2)

Refrigerant Emissions, Alternatives and Leakage
– blended learning for low GWP refrigerants

Objectives

1. Increase knowledge amongst technicians in partner and stakeholder countries.
2. Address inconsistencies in skills across the whole of the EU and worldwide
3. Overcome equipment operator and distributor concerns over safety, reliability, containment, efficiency and standards restrictions
4. Support implementation of F Gas Regs, Kigali amnd and transition to low GWP alternatives

With contribution of
the LIFE programme
of the European Union

Key Project information

- Project co-ordinator - IOR (UK)
- Management Team – includes original REAL Alternatives project (2016)
- Stakeholders group of seven new organisations
- At the end of the project will be translated in 13 languages
- 9 Modules (8 existing ones revised plus 1 new)
- Train the Trainer resources, Licences and Certification
- Study visits (4 in training centres eg Belgium, Germany, UK, Poland, Italy)
- Train the Trainer events (5 in stakeholder locations – 20 people at each)
- Project presence at conferences, trade shows and exhibition, international governmental meetings, policy makers
- Generating regular articles/newsletters/social media
- Together we have the potential to reach 228,0000 employers, 26,000 RACHP installation businesses and 100 suppliers across Europe and internationally

REAL Alternatives for LIFE – 1st Project Meeting – 20-21 June 2017

Introduction

to Alternative Refrigerants

Contents

- 1-Introduction
- 2-R744 (carbon dioxide, CO₂)
- 3-R717 (ammonia, NHG₃)
- 4-R32 (HFC)
- 5-R1234ze and R1234yf (HFO)
- 6-Safety
- 7-Toxicity and flammability
- 8-Pressures
- 9-Restrictions on use
- 10-Performance and operating conditions
- 11-Environmental impact
- 12-Availability
- 13-Leakage issues
- 14-Relevant standards and legislation

	Type	Key facts	GWP ¹
R744	Carbon dioxide, CO ₂	High pressures	1
R717	Ammonia, NH ₃	Toxic and Lower flammability	0
R32	Hydro fluoro carbon, HFC	Lower flammability	675
R1234ze	Unsaturated HFC (aka hydro fluoro olefin, HFO)	Lower flammability	7
R1234yf	Unsaturated HFC (aka hydro fluoro olefin, HFO)	Lower flammability	4
R600a	Isobutane, C ₄ H ₁₀ , hydrocarbon (HC)	Higher flammability	3
R290	Propane, C ₃ H ₈ , hydrocarbon (HC)	Higher flammability	3
R1270	Propene (propylene), C ₃ H ₆ , hydrocarbon	Higher	3

Elearning and booklets – being updated and extended

Introduction to Module 1

This e-learning Module (no 1 of 8) gives an introduction to currently available alternatives to high GWP refrigerants.

Once you have completed Module 1 you will be able to access all of the remaining e-learning Modules.

Aim of Module 1

In this Module we will provide a general introduction to the different alternatives to high global warming potential (GWP) hydro fluoro carbon (HFC) refrigerants and compare their properties, performance, safety issues, environmental impact and ease of use. These refrigerants are used in new, specially designed systems – they are rarely suitable to replace refrigerants in existing systems.

The main alternatives have low to zero GWP, but it is important that a refrigerant is not selected on the basis of low GWP alone; other characteristics should be taken into account such as:

- Operating pressures;
- Performance – capacity and efficiency;
- Material compatibility, including compressor lubricant;
- Safety, including flammability and toxicity;
- Temperature glide;
- Ease of use and skill level of design engineers and technicians who install, service and maintain equipment.

This is useful reference material for anyone working in the refrigeration, air conditioning and heat pump (RACHP) industry. It assumes you already have knowledge of RACHP systems which use HFC refrigerants.

CONCLUSIONS:

Promote the certification of RAC Service Technicians

For the success of training and certification some important recommendations should be considered:

- Certification should be made compulsory by law for every technician who is handling refrigerants
- Certification should be necessary to buy refrigerants and the equipment (if not hermetically sealed)
- Certification should be properly and publicly advertised at all levels (end-users, service companies, manufacturers, government institutions) as an added value to guarantee professionalism through seminars. Information should be made available to the technicians and the end users

Possible barriers before and after the certification should be considered, such as:

- technicians may see Certification as an added cost, a tax to enter the sector
- the process may be very bureaucratic , it must be made simple
